

Germicidal lamps

Victory germicidal lamps provide a highly efficient source of UV light for medical and commercial applications. They are available in single-ended and double-ended formats with widely-used G10.2q, G5, G13, G23 and 2G11 bases.

Victory germicidal lamps utilise low pressure mercury vapour to produce UV light at 253.7nm which is very effective for germicidal uses.

Efficient, simple, germ control

- Ozone-free quartz
- Hot cathode, pre-heat start
- 8000 hour average lamp life
- Double-ended with G5 or G13 base
- Single ended with G10.2q, 2G11 or G23 base
- G23 has internal starter

Double-ended

Single-ended

Applications

- Hospitals
- Schools
- Hotels
- Air or object disinfection
- Offices
- Domestic
- Operating rooms
- Medical disinfection
- Photochemical processes
- Bacticlean
- Pond Filters
